IMAGE PROCESSING

COMPUTER VISION

OpenCV • YOLO • Mask R-CNN • Real-time Processing

MACHINE LEARNING

PyTorch • TensorFlow • XGBoost • Random Forest

LANGUAGES

Python • C++ • C# • Docker

HARDWARE & CONTROL

ROS2 • Device Integration • Sensors & Actuators • AWS • Gazebo • PX4

FRONTEND

React • React Native • TypeScript

LANGUAGES

English - C1 Cambridge

Spanish - Native

German - A1

EDUCATION

Computer Engineering

UPV (2024)

Samsung AI Diploma (350h)

JAIME CANDEL MARTÍNEZ

SOFTWARE DEVELOPER - ML & IMAGE PROCESSING

Software engineer with 2+ years developing machine learning and computer vision solutions. Deep expertise in image processing pipelines, training and deploying ML models, and integrating vision systems with hardware control. Experienced building production systems using Python, C++, and industry-standard frameworks. Proven ability to solve complex technical problems, work in interdisciplinary teams, and deliver robust solutions.

WORK EXPERIENCE

Software Developer - PYGSAGROUP

July 2023 – January 2024

Designed and deployed computer vision pipelines for industrial applications, processing high-resolution images in real-time with OpenCV and Cognex Vision Pro

Implemented YOLO and Mask R-CNN models for object detection and segmentation, optimizing accuracy and inference speed for production deployment

Developed C++ pipelines for image processing on edge computing systems with performance optimization for embedded environments

Collaborated with cross-functional teams to understand requirements and deliver production-ready vision solutions

Software Developer - Grupo Alonso

July 2024 – July 2026

Built backend systems and microservices for complex control applications using Python and C#

Integrated hardware control systems with software infrastructure deployed to cloud (Azure) and edge environments

Wrote production code in C++ and Python following system specifications and customer requirements

Software Developer - HP

January 2024 – July 2024

Developed and maintained simulator software for large-scale industrial printing equipment, modeling complex hardware behavior and system interactions

Implemented control software and interfaces for complex systems using C++ and C#

Implemented microservices architecture for system integration and cloud deployment

PERSONAL PROJECTS & EXPERTISE

Autonomous Drone Vision System (ROS2): Developed autonomous drone guidance and control system using computer vision without GPS. Implemented sensor integration, real-time image processing, and device control protocols, demonstrating practical experience connecting and controlling hardware, sensors, and actuators. Tested in Gazebo and real live.

Machine Learning Models: Trained and deployed XGBoost and Random Forest models for data analysis. Experience with PyTorch and TensorFlow through Samsung Innovation Campus diploma focused on deep learning and ML pipelines.

Image Processing Research: Hands-on experimentation with OpenCV, YOLO, and Mask R-CNN in personal projects, understanding model training, evaluation, and optimization for different use cases.

EDUCATION

Bachelor of Science, Computer Engineering

Universidad Politécnica de Valencia (UPV) • 2020-2024

Computer architecture, programming (Java, C, C#, Python), network management, systems design

Diploma - Artificial Intelligence & Machine Learning
